

Job Title: - Draftsman

Responsibilities: -

- Using Auto CAD software, and survey data processing and production of DTM and modeling tools to create rough sketches as well as detailed drawings
- Creating technical drawings as per the specifications and calculations provided
- Communicating with the Engineers and Architects to determine the technical requirements
- Submitting the drafts to the Engineering team for review
- Ensuring that the final designs meet the industry standards and building regulations
- Examining and noting any errors in the technical designs
- Calculating weight limitations and other structural dimensions before beginning work
- Preparing manuals describing product features, operations, and maintenance
- Making changes to the technical drawings and drafts based on the feedback provided by the Engineers and Architects

Requirements: -

- Bachelor's degree in Architecture, Engineering, or a related field
- Minimum 03 year's related experience
- Proven work experience as a Draftsman or Drafter in the Engineering department
- Familiarity with Computer-Aided Design software as well as 3D modeling tools
- Excellent technical skills and mathematical skills
- Ability to work independently and collaboratively
- Strong analytical and problem-solving skills
- Ability to manage strict deadlines
